DoD Zero Trust Capability Execution Roadmap (COA 1)

15 November 2022
There is one destination (ZT) with many paths (COAs) – COA 1 will be the focus

**Focus of this Briefing**

**COA 1**

**ZT Baseline**
- Leverages current infrastructure and environment using Brownfield approach
- Zero Trust “on the ground” modernization: ~ 5+ yr. (FYDP beginning FY23) Implementation Plan
- Establishes set capabilities and activities needed to achieve Target and Advanced-levels of Zero Trust
- No constraints on tools or methods to accomplish ZT

**COA 2**

**Commercial Cloud**
- Relies on commercial provider(s) to develop ZT compliant cloud environments using Greenfield approach
- Achieves DoD ZT quicker than COA-1
- Mandate would be to achieve DoD ZT “Target” level, at a minimum
- Provides standardized tools and capabilities to support ZT execution

**COA 3**

**Private Cloud**
- Government Owned/Operated high-performance Native ZT Cloud (NZTC) using Greenfield approach
- Achieves DoD ZT quicker than COA-1
- Achieves immediate DoD ZT “Advanced” level by design, which needs to be independently validated

### Under Development

**ZT Baseline**
- Leverages current infrastructure and environment using Brownfield approach
- Zero Trust “on the ground” modernization: ~ 5+ yr. (FYDP beginning FY23) Implementation Plan
- Establishes set capabilities and activities needed to achieve Target and Advanced-levels of Zero Trust
- No constraints on tools or methods to accomplish ZT
Over the last several months, the ZT Portfolio Management Office (PfMO) has worked to establish the capabilities necessary to successfully accomplish Zero Trust, and laid them out on a roadmap for execution across the DoD with the following method:

**Define**

Producing a common lexicon on capability descriptions, outcomes, and impact statements, activity outcomes, and providing appropriate references were the necessary first steps.

**Understand and Contextualize**

Realizing the relationships and dependencies helped to drive timeline development.

**Develop and Refine**

Multiple iterations resulted in one primary COA, opportunities for acceleration with cloud, and other considerations supporting an executable plan.

*The resulting plan supports the execution of Zero Trust across the DoD to the required level by FY2027*
The Concept of COA 1

This stage was primarily about defining “WHAT” the DoD needed to do execute ZT – agnostic of COAs

With this methodology, one iteration emerged as the final timeline

*Timelines and activity durations did account for high-level research-based considerations around these critical elements

**Other Considerations – More to Come**

Limited development could be done in these areas until ZT capabilities were defined and mapped out

**Budget and Acquisition** – Capabilities were spread out over time with these concerns in mind, but will require much deeper considerations at the capability and activity level

**Technical Implementation** – Defines “how” to accomplish ZT – COA 1 is about allowing organizations to choose their own methods. COA 2 /3 will better address this. More guidance is coming on controls associated with capabilities, and implementation strategies
Table of Contents

1. COA 1: Recommendations and Other Relevant Timelines
2. Timeline Development and Methodology
3. Key Communications

Appendices

Appendix A: COA 1 Timeline Details (DoD Baseline)
Appendix B: Accelerated DoD Baseline Timeline Details
Appendix C: Capability Definitions
COA 1
Recommendations and Other Relevant Timelines
After multiple iterations, this timeline is now “COA 1 (DoD Baseline)"

Balances an aggressive approach to achieving “Target Level ZT” by FY27 with the DoD Budget Cycle by distributing activities over the FYDP and setting Department-Wide expectations.

See Appendix A for methodology
Other timelines provide amplifying points and support additional PfMO analysis

**DoD Accelerated Baseline:** seeks to achieve “Advanced ZT” more quickly with a more aggressive approach that pushes start dates to the left as much as possible; this accelerated approach is included as an example for organizations seeking to achieve “advanced ZT” more quickly.

*See Appendix B for methodology*

**Forward/backward Pass Projections:** assess the likely achievement date of Target and Advanced ZT levels based on risk, duration standard deviations, and cloud employment.
Timeline
Development and Methodology

Note: “Execution Enablers” as referenced in the following slides are cross-cutting, non-technical capabilities and activities that address culture, governance, and elements of DOTmLPF-P (e.g., ZT Training, etc.) that support the design, development and deployment of the ZT Capabilities required to achieve the DoD Target and Advanced Levels. Details regarding supporting enablers will be further refined and integrated into next versions of the DoD ZT Capability Roadmap and addressed in implementation plans. Enablers identified to-date include: ZT Awareness & Culture, Adaptive Implementation Governance, ZT Policy Framework, ZT Training, and others.
DoD Zero Trust Capabilities

**User**
1.1 User Inventory
1.2 Conditional User Access
1.3 Multi-Factor Authentication
1.4 Privileged Access Management
1.5 Identity Federation & User Credentialing
1.6 Behavioral, Contextual ID, and Biometrics
1.7 Least Privileged Access
1.8 Continuous Authentication
1.9 Integrated ICAM Platform

**Device**
2.1 Device Inventory
2.2 Device Detection and Compliance
2.3 Device Authorization with Real Time Inspection
2.4 Remote Access
2.5 Partially & Fully Automated Asset, Vulnerability and Patch Management
2.6 Unified Endpoint Management (UEM) & Mobile Device Management (MDM)
2.7 Endpoint & Extended Detection & Response (EDR & XDR)

**Application & Workload**
3.1 Application Inventory
3.2 Secure Software Development & Integration
3.3 Software Risk Management
3.4 Resource Authorization & Integration
3.5 Continuous Monitoring and Ongoing Authorizations

**Data**
4.1 Data Catalog Risk Assessment
4.2 DoD Enterprise Data Governance
4.3 Data Labeling and Tagging
4.4 Data Monitoring and Sensing
4.5 Data Encryption & Rights Management
4.6 Data Loss Prevention (DLP)
4.7 Data Access Control

**Network & Environment**
5.1 Data Flow Mapping
5.2 Software Defined Networking (SDN)
5.3 Macro Segmentation
5.4 Micro Segmentation
5.5 Data Flow Mapping
5.6 Data Flow Mapping
5.7 Data Flow Mapping

**Automation & Orchestration**
6.1 Policy Decision Point (PDP) & Policy Orchestration
6.2 Critical Process Automation
6.3 Machine Learning
6.4 Artificial Intelligence
6.5 Security Orchestration, Automation & Response (SOAR)
6.6 API Standardization
6.7 Security Operations Center (SOC) & Incident Response (IR)

**Visibility & Analytics**
7.1 Log All Traffic (Network, Data, Apps, Users)
7.2 Security Information and Event Management (SIEM)
7.3 Common Security and Risk Analytics
7.4 User and Entity Behavior Analytics
7.5 Threat Intelligence Integration
7.6 Automated Dynamic Policies

**EXECUTION ENABLERS**
- Doctrine
- Organization
- Training
- Material
- Leadership & Education
- Personnel
- Facilities
- Policy

Note: Click on each Capability Title for details

V1.0 as of 10/04/2022
Capabilities, Activities, and their dependencies were identified and aligned to ZT Levels

**Capabilities**

1.1 User Inventory

1.2 Conditional User Access

1.3 Multi-Factor Authentication

1.4 Privileged Access Management

**Activities and Level**

**Predecessor and Successor Relationships**

**ZT Target Level** = All DoD organizations must achieve this level

**Advanced ZT** = Certain organizations must reach this level based on system and information sensitivity
Timelines were developed by fixing the activities to a set starting point

All DoD organizations are expected to achieve ZT Target Level by 2027

Activities & Durations – Each activity has time duration assigned. Durations were calculated using a DELPHI method employing three teams to determine the required level of effort. The durations were laid out over time based on the dependency relationships established.

Set Starting Point – If capabilities are laid out over time starting at 2023 and with all Target levels completed by 2027.
Multiple timelines were generated for analysis

The capabilities and activities, plus their associated durations, ZT Target designations, and sequencing dependencies were entered into an MS Project File (attached)

Dates are calculated start and finish from the activity level through the pillar level

1. The initial outcomes were mapped to visualize when pillars would achieve the ZT Target levels
2. Activity dependencies were re-evaluated, resulting in an updated timeline to achieve ZT Target Levels
3. Leveling activity distribution over FYs resulted in COA 1 and supported further acceleration efforts
Each pillar has an associated timeline broken down into activities.

Each Pillar-Capability Timeline is structured based on the dependency relationships (at the activity level) and ZT execution levels as detailed in the attached MS Project document. Activity dates are recommendations and not intended to serve as a formal requirement.
Key Communications
DoD Zero Trust Capabilities

1. User Inventory
   - 1.1 User Inventory
   - 1.2 Conditional User Access
   - 1.3 Multi-Factor Authentication
   - 1.4 Privileged Access Management
   - 1.5 Identity Federation & User Credentialing
   - 1.6 Behavioral, Contextual ID, and Biometrics
   - 1.7 Least Privileged Access
   - 1.8 Continuous Authentication
   - 1.9 Integrated ICAM Platform

2. Device Inventory
   - 2.1 Device Inventory
   - 2.2 Device Detection and Compliance
   - 2.3 Device Authorization with Real Time Inspection
   - 2.4 Remote Access
   - 2.5 Partially & Fully Automated Asset, Vulnerability and Patch Management
   - 2.6 Unified Endpoint Management (UEM) & Mobile Device Management (MDM)
   - 2.7 Endpoint & Extended Detection & Response (EDR & XDR)

3. Application & Workload Inventory
   - 3.1 Application Inventory
   - 3.2 Secure Software Development & Integration
   - 3.3 Software Risk Management
   - 3.4 Resource Authorization & Integration
   - 3.5 Continuous Monitoring and Ongoing Authorizations
   - 3.6 Unified Endpoint Management (UEM) & Mobile Device Management (MDM)
   - 3.7 Endpoint & Extended Detection & Response (EDR & XDR)

4. Data Catalog
   - 4.1 Data Catalog Risk Assessment
   - 4.2 DoD Enterprise Data Governance
   - 4.3 Data Labeling and Tagging
   - 4.4 Data Monitoring and Sensing
   - 4.5 Data Encryption & Rights Management
   - 4.6 Data Loss Prevention (DLP)
   - 4.7 Data Access Control

5. Network & Environment Inventory
   - 5.1 Data Flow Mapping
   - 5.2 Software Defined Networking (SDN)
   - 5.3 Macro Segmentation
   - 5.4 Micro Segmentation
   - 5.5 Software Defined Networking (SDN)
   - 5.6 Data Monitoring and Sensing
   - 5.7 Data Access Control

6. Automation & Orchestration
   - 6.1 Policy Decision Point (PDP) & Policy Orchestration
   - 6.2 Critical Process Automation
   - 6.3 Machine Learning
   - 6.4 Artificial Intelligence
   - 6.5 Security Orchestration, Automation & Response (SOAR)
   - 6.6 API Standardization
   - 6.7 Security Operations Center (SOC) & Incident Response (IR)

7. Visibility & Analytics
   - 7.1 Log All Traffic (Network, Data, Apps, Users)
   - 7.2 Security Information and Event Management (SIEM)
   - 7.3 Common Security and Risk Analytics
   - 7.4 User and Entity Behavior Analytics
   - 7.5 Threat Intelligence Integration
   - 7.6 Automated Dynamic Policies

Note: Click on each Capability Title for details

V1.0 as of 10/04/2022
Many capabilities have multiple activities that span from target to advanced – Accomplishment of “ZT Target Level” and “Advanced ZT” will be determined at the Activity level.
Zero Trust Target Level

- 1.1 User Inventory
- 1.7 Least Privileged Access
- 2.5 Partially & Fully Automated Asset, Vulnerability and Patch Mgmt.
- 2.6 Unified Endpoint Management (UEM) & Mobile Device Management (MDM)
- 3.1 Application Inventory
- 3.3 Software Risk Management
- 4.1 Data Catalog Risk Alignment
- 4.2 DoD Enterprise Data Governance
- 5.1 Data Flow Mapping
- 5.3 Micro Segmentation
- 6.1 PDP & Orchestration
- 6.2 Software Defined Networking
- 6.5 Security Orchestration, Automation, and Response
- 6.7 SOC & Incident Response
- 6.4 Artificial Intelligence
- 6.3 Machine Learning
- 6.6 API Standardization
- 7.4 User & Entity Behavior Analytics (UEBA)
- 7.6 Automated Dynamic Policies

Advanced Zero Trust

- 1.2 Conditional User Access
- 1.3 Multifactor Authentication
- 1.4 Privileged Access Mgmt.
- 1.5 Identity Federation and User Credentialing
- 1.6 Behavioral, Contextual ID, & Biometrics
- 1.8 Continuous Authentication
- 1.9 Integrated CAM Platform
- 2.1 Device Inventory
- 2.2 Device Detection and Compliance
- 2.3 Device Authorization w/ Real Time Inspection
- 2.4 Remote Access
- 2.7 Endpoint & Extended Detection & Response (EDR & XDR)
- 3.2 Software Development & Integration
- 3.4 Resource Authorization & Integration
- 4.4 Data Monitoring & Sensing
- 4.3 Data Labeling & Tagging
- 4.5 Data Encryption & Rights Mgmt.
- 4.6 Data Loss Prevention
- 4.7 Data Access Control
- 5.2 Software Defined Networking
- 5.4 Micro Segmentation
- 6.1 PDP & Orchestration
- 6.2 Software Defined Networking
- 6.5 Security Orchestration, Automation, and Response
- 6.7 SOC & Incident Response
- 6.4 Artificial Intelligence
- 6.6 API Standardization
- 7.4 User & Entity Behavior Analytics (UEBA)
- 7.6 Automated Dynamic Policies

Note: ZT Capabilities in bold font and displayed on the ZT Target line contain activities spanning both Target and Advanced ZT.
Zero Trust Target Level

**Advanced Zero Trust**

- 1.2.2B/Use Based Dynamic Access Pr. 1
- 1.2.2Enterprise Roles and Permissions Pr. 1
- 1.2.2/New Flexible WPA Pr. 1
- 1.4.4/Real Time Approvals & JTI/EA Analytics Pr. 1
- 1.5.2Enterprise Identity Lifecycle Management Pr. 2
- 1.6.2Enterprise User Monitoring Pr. 1
- 1.6.3/Enterprise Monitoring Pr. 1

User

Device

**Application & Workload**

Once capabilities are broken out into activities, ZT Target Level and Advanced ZT provide a much more definitive path to execution.

**Note**: ZT Activities are grouped as either Target or Advanced.

Version 1.0 As of 10/04/2022
COA 1 (DoD Baseline) achieves Target Level ZT by the end of FY27

- Assumes a start date of FY23;
- It provides a baseline roadmap for a stakeholder who has not yet commenced efforts in developing ZT;
- Stakeholders who have achieved activities on the roadmap can “move ahead”;
- Does not proscribe specific solutions to achieving the activities required;
- It allows for some buffer in Target ZT achievement date to the stated goal (end of FY27) if delays occur.

Appendix A: COA 1
Timeline Details (DoD Baseline)

Note 1: The timeline depicted is meant to show how activities may be sequenced to achieve Target Level ZT by the end of FY27 as proscribed in the DoD Zero Trust Strategy; these activity durations are meant to serve as estimates for planning purposes only.

Note 2: The DoD Zero Trust Capability Roadmap described in the High-Level Capability Roadmap section below provides a guide to follow for the DoD baseline course of action (COA). Additionally, to accelerate Zero Trust adoption, the Department is considering several additional complementary COAs including commercial and Government-owned cloud-based enterprise services.

= Target Level ZT

= Advanced ZT
**Aggressively shifting activity start dates to FY23 accelerates ZT achievement dates**

Shifting Target and Advanced ZT dates left as much as possible (e.g., when not limited by predecessor activities) significantly reduces the overall timeline to ZT accomplishment.

This timeline serves as a model for those stakeholders who have the desire (and capacity) to achieve Advanced ZT more quickly than the recommended baseline COA 1.

### Left-shifting Activities:

- ✔ Reduces the time to achieving Target Level ZT
- ✔ May result in increased financial and personnel resourcing in the near term due to increased requirements
- ✔ Due to shifting priorities to the left, reduces the risk that other priorities supersede Zero Trust in future years
- X Stakeholders may view this timeline as unrealistic
- X May result in misprioritization of activity accomplishment (e.g., by focusing on advanced activities too soon)

<th>Activities</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.1</td>
<td>User Inventory</td>
<td>1 - User</td>
<td>Regular and Privileged users are identified and integrated into an inventory supporting regular modifications. Applications, software and services that have local users are all part of the inventory and highlighted.</td>
<td>System owners have control (visibility and administrative rights) of all authorized and authenticated users on the network</td>
<td>Users not on the authorized user list will be denied access by policy</td>
<td>* Inventory User</td>
</tr>
</tbody>
</table>
| 1.2  | Conditional User Access     | 1 - User | Through maturity levels Conditional Access works to create a dynamic level of access for users in the environment. This starts with traditional role-based access controls across a federate ICAM, expands to be application focused roles and ultimately utilizes enterprise attributes to provide dynamic access rules. | Eventually, organizations control user, device, and non-user entity DAAS access through dynamically changing user risk profiles and fine-grained access control to include the use of user risk assessments | Users not known to the system and users who present an unacceptable degree of risk will be denied access with greater accuracy | * Implement App Based Permissions per Enterprise  
* Rule Based Dynamic Access Pt1  
* Rule Based Dynamic Access Pt2  
* Enterprise Gov't roles and Permissions Pt1  
* Enterprise Gov't roles and Permissions Pt2 |
| 1.3  | Multi-Factor Authentication (MFA) | 1 - User | This capability initially focuses on developing an organization focused MFA provider and Identity Provider to enable the centralization of users. Retirement of local and/or built-in accounts and groups is a critical piece to this capability. At the later maturity levels alternative and flexible MFA tokens can be used to provide access for standard and external users. | DoD organizations require users and non-user entities to authenticate using at least two of the following three attributes: knowledge (user ID/password), possession (CAC/token), or something you are (inherence, e.g., iris/fingerprints), in order to access DAAS | Users not presenting multiple forms of authentication will be denied access to DAAS system and resources | * Organizational MFA/IDP  
* Alternative Flexible MFA Pt1  
* Alternative Flexible MFA Pt2 |
| 1.4  | Privileged Access Management (PAM) | 1 - User | The capability focuses on removal of permanent administrator/elevated privileges by first creating a Privileged Account Management (PAM) system and migrating privileged users to it. The capability is then expanded upon by using automation with privilege escalation approvals and feeding analytics into the system for anomaly detection. | DoD organizations control, monitor, secure, and audit privileged identities (e.g., through password vaulting, JIT/JEA with PAWS) across their IT environments | Critical assets and applications secured, controlled, monitored and managed through limits on admin access | * Implement System and Migrate Privileged Users Pt1  
* Implement System and Migrate Privileged Users Pt2  
* Real time Approvals & JIT/JEA Analytics Pt1  
* Real time Approvals & JIT/JEA Analytics Pt2 |

<tr>
<td>1.5</td>
<td>Identity Federation &amp; User Credentialing</td>
<td>1 - User</td>
<td>The initial scope of this capability focuses on standardizing the Identity Lifecycle Management (ILM) processes and integrating with the standard organizational IDP/IDM solution. Once completed the capability shifts to establishing an Enterprise ILM process/solution either through a single solution or identity federation.</td>
<td>DoD organizations manually issue, manage, and revoke credentials bound to DoD person, device, and NPE identities. Identity information is developed and shared across entities and trust domains providing “single sign-on” convenience and efficiencies to identified (authenticated and authorized) users and devices.</td>
<td>Visibility and accuracy of user authentication information is increased, to include DoD users and users managed by other agencies. Users lacking sufficient credentials are denied access according to established policies.</td>
<td>* Organizational Identity Life-Cycle Management * Enterprise Identity Life-Cycle Management Pt1 * Enterprise Identity Life-Cycle Management Pt2 * Enterprise Identity Life-Cycle Management Pt3</td>
</tr>
<tr>
<td>1.6</td>
<td>Behavioral, Contextual ID, and Biometrics</td>
<td>1 - User</td>
<td>Utilizing the Enterprise IDP, user and entity behavioral analytics (UEBA) are enabled with basic user attributes. Once completed this is expanded into Organizational specific attributes using Organizational IDPs as available. Finally UEBA are integrated with the PAM and JIT/JEA systems to better detect anomalous and malicious activities.</td>
<td>DoD organizations utilize behavioral, contextual, and biometric telemetry to enhance risk-based authentication and access controls</td>
<td>Behavioral, contextual, and biometric telemetry enhances MFA with</td>
<td>* Implement User &amp; Entity Behavior Activity (UEBA) and User Activity Monitoring (UAM) Tooling * User Activity Monitoring Pt1 * User Activity Monitoring Pt2</td>
</tr>
<tr>
<td>1.7</td>
<td>Least Privileged Access</td>
<td>1 - User</td>
<td>DoD organizations govern access to DAAS using the absolute minimum access required to perform routine, legitimate tasks or activities. DoD Application Owners identify the necessary roles and attributes for standard and privileged user access. Privileged access for all DoD organization DAAS is audited and removed when unneeded.</td>
<td>DoD organizations govern access to DAAS using the absolute minimum access required to perform routine, legitimate tasks or activities</td>
<td>Users on the network only have access to the DAAS for which they are authorized and authenticated over a specific timeframe</td>
<td>* Deny User by Default Policy</td>
</tr>
<tr>
<td>1.8</td>
<td>Continuous Authentication</td>
<td>1 - User</td>
<td>The DoD organizations and overall enterprise will methodically move towards continuous attribute based authentication. Initially the capability focuses on standardizing legacy single authentication to a organizationally approved IDP with users and groups. The second stages adds in based rule based (time) authentication and ultimately matures to Continuous Authentication based on the application/software activities and privileges requested.</td>
<td>DoD organizations continuously authenticate and authorize users’ access to DAAS within and across sessions using MFA</td>
<td>Users not continuously presenting multiple forms of authentication will be denied access to DAAS system and resources</td>
<td>* Single Authentication * Periodic Authentication * Continuous Authentication Pt1 * Continuous Authentication Pt2</td>
</tr>
</tbody>

</tr>
</thead>
</table>
| 1.9  | Integrated ICAM Platform    | 1 - User | DoD organizations and overall enterprise employ enterprise-level identity management and public key infrastructure (PKI) systems to track user, administrator and NPE identities across the network and ensure access is limited to only those who have the need and the right to know. Organizations can verify they need and have the right to access via credential management systems, identity governance and administration tools, and an access management tool. PKI systems can be federated but must either trust a central root certificate authority (CA) and/or cross-sign standardized organizational CA’s. | DoD organizations employ enterprise-level identity management systems to track user and NPE identities across the network and ensure access is limited to only those who have the need and the right to know; organizations can verify they need and have the right to access via credential management systems, identity governance and administration tools, and an access management tool. PKI systems can be federated but must either trust a central root certificate authority (CA) and/or cross-sign standardized organizational CA’s. | Identities of users and NPE are centrally managed to ensure authorized and authenticated access to DAAS resources across platforms                                                                                             | * Enterprise PKI/IDP Pt1  
* Enterprise PKI/IDP Pt2  
* Enterprise PKI/IDP Pt3                                                                                     |
| 2.1  | Device Inventory            | 2 - Device | DoD organizations establish and maintain an approved inventory list of all devices authorized to access the network and enroll all devices on the network prior to network connection. Device attributes will include technical details such as the PKI (802.1x) machine certificate, device object, patch/vulnerability status and others to enable successor activities.                                                                                                                                                    | DoD organizations establish and maintain a trusted inventory list of all devices authorized to access the network and enroll all devices on the network prior to network connection | By default policy, devices will be denied network access; the only devices permitted access to the network shall be known, authorized, and listed in the device inventory                                                                                      | * Device Health Tool Gap Analysis  
* NPE/PKI, Device under Management  
* Enterprise IDP Pt1  
* Enterprise IDP Pt2                                                                                   |
| 2.2  | Device Detection and Compliance | 2 - Device | DoD organizations employ asset management systems for user devices to maintain and report on IT and Cybersecurity compliance. Managed devices (enterprise and mobile) attempting to connect to a DoD network or access a DAAS resource is detected and has its compliance status confirmed (via C2C).                                                                                                                  | DoD organizations employ asset management systems for user devices to maintain and report on IT and Cybersecurity compliance. Managed devices (enterprise and mobile) attempting to connect to a DoD network or access a DAAS resource is detected and has its compliance status confirmed (via C2C). | Any device attempting to connect to the network will be detected; only those devices that are compliant (e.g., anti-virus is up to date, approved configuration) will receive access to requested DAAS                                                                 | * Implement C2C/Compliance Based Network Authorization Pt1  
* Implement C2C/Compliance Based Network Authorization Pt2                                                                                                   |

</table>
| 2.3  | Device Authorization w/ Real Time Inspection  | 2 - Device                  | DoD Organizations conduct foundational and extended device tooling (NextGen AV, AppControl, File Integrity Monitoring (FIM), etc.) integration to better understand the risk posture. Organizational PKI systems are integrated to expand the existing Enterprise PKI to devices as well. Lastly, Entity Activity Monitoring is also integrated to identify anomalous activities. DoD organizations establish processes (e.g., Enterprise PKI) and utilize tools to identify any device (including unmanaged devices, infrastructure devices, and endpoint devices) attempting to access the network, and make a determination if the device should be authorized to access the network. Maturation of this capability monitoring and detection of this activity on endpoints and IT infrastructure in real time. Components can use policies to deny devices by default and explicitly allow access to DAAS resources only by devices that meet mandated configuration standards. Security threats identified are remediated faster through continuous activity inspection enables faster remediation of security threats. |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | * Entity Activity Monitoring Pt1  
* Entity Activity Monitoring Pt2

* Integrate NextGen AV Tools with C2C  
* Fully Integrate Device Security stack with C2C as appropriate  
* Enterprise PKI Pt1  
* Enterprise PKI Pt2 |
| 2.4  | Remote Access                                  | 2 - Device                  | DoD organizations audit existing device access processes and tooling to set a least privilege baseline. In phase 2 this access is expanded to cover basic BYOD and IOT support using the Enterprise IDP for approved applications. The final phases expand coverage to include all BYOD and IOT devices for services using the approved set of device attributes. DoD organizations establish policies to allow authorized users and devices access to the network or a device from a geographical distance through a network connection. Enables properly authorized and authenticated users and NPEs to access DAAS from remote locations. |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | * Deny Device by Default Policy  
* Managed and Limited BYOD & IOT Support  
* Managed and Full BYOD & IOT Support Pt1  
* Managed and Full BYOD & IOT Support Pt2 |
| 2.5  | Partially & Fully Automated Asset, Vulnerability and Patch Management | 2 - Device                  | DoD organizations establish processes to automatically test and deploy vendor patches for connected devices; hybrid patch management (both human and automated) is employed. DoD organizations establish processes to automatically test and deploy vendor patches for connected devices; hybrid patch management (both human and automated) is employed. DoD organizations establish processes to automatically test and deploy vendor patches for connected devices; hybrid patch management (both human and automated) is employed. DoD organizations establish processes to automatically test and deploy vendor patches for connected devices; hybrid patch management (both human and automated) is employed. DoD organizations establish processes to automatically test and deploy vendor patches for connected devices; hybrid patch management (both human and automated) is employed. | Risk is minimized by automatically deploying vendor patches to all network devices. DAAS resources are protected through agent and agentless management, IT is able to manage, secure, and deploy resources and applications on any device from a single console to provide redress of cybersecurity threats. Security vulnerabilities are mitigated, and policy enforcement measures are received through IT remote management of DoD-issued mobile devices. |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | * Implement Asset, Vulnerability and Patch Management Tools
